HIATUC4
MHC class I histocompatibility antigen HLA-C4 alpha chain - human
C; Species: Homo sapiens (man)
C; Date: 31-Dec-1988 #sequence_revision 31-Dec-1988 #text_change 22-Jun-1999
C; Accession. A24512
R; Davidson, W.F.; Kress, M.; Khoury, G.; Jay, G.
J. Biol. Chem. 260, 13414-13423, 1985
A; Title: Comparison of HLA class I gene sequences. Derivation of locus-specific oligonuc
A; Reference number: A92500; MUID:86033791; PMID:3863816
A; Accession: A24512
A; Molecule type: DNA
A; Residues: 1-342 - DAV>
A; Cross-references: GB:M11886; NID:g184173; PIDN:AA52665.1; PID:g386777
C; Genetics:
A; Gene: GDB:HLA-C
A; Cross-references: GB:M1931; OMIM:142840
A; Map position: 6621.3-5621.3
C; Superfamily: class I histocompatibility antigen; immunoglobulin homology
C; Keywords: glycoprotein; heterodimer; transmembrane protein; transplantation antigen
F; 196-261/Domain: immunoglobulin homology < IMM>
F; 86/Binding site: carbohydrate (Asn) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             type I restriction enzyme M protein, truncated homolog UU098 [imported] - Ureaplasma ure C; Species: Ureaplasma urealyticum S; Stacession: B82303 R; Glass, J.I.; Lefkowitz, E.J.; Glass, J.S.; Heiner, C.R.; Chen, B.Y.; Cassell, G.H. Bubmitted to GenBank, February 2000 A; Description: The complete sequence of Ureaplasma urealyticum: Alternate views of a mir A; Reference number: A82810 A; Retension: Prelimiary A; Molecule type: DNA A; Status: prelimiary A; Molecule type: DNA A; Resference number: B82333 A; Status: prelimiary A; Molecule type: DNA A; Cross-references: GB:AE002110; GB:AF222894; NID:G6899051; PIDN:AAF30504.1; GSPDB:GN001 A; Experimental source: Berovar 3; biovar 1 C; Genetics: A; Genetics: A; Genetics: A; Genetic code: SGC3 C; Superfamily: type I site-specific deoxyribonuclease chain hsdM

hypothetical protein At2g19340 [imported] - Arabidopsis thaliana
N;Alternate names: hypothetical protein P27F23.14
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Accession: T01282; B84575
C;Accession: T01282; B84575
Submitted to the EMBL Data Library, May 1998
A;Description: Arabidopsis thaliana chromosome II BAC P27F23 genomic sequence.
A;Reference number: 214177
                                                                                                                                                                                                                                                                                                                                                                             A; Accession: T01222

"Consignal CDNA sequence analysis and patch clamp studies of a toxin

"Toxicon 36:1971-1980(1998).

"Toxicon 36:1971-1980(1998).

"I FUNCTION: Anagonist of L-type calcium channels (By similarity).

"I SUBJEBLUIAR LOCATION: Secreted.

"I SIMILARITY: Belongs to the spider toxin Tx3 family.

InterPro; IPRO04169; spidertoxin.

"Toxicon PRO2819; spidertoxin; IncerPro; Inhibitor; Calcium channel inhibitor;

"Correction of HiA-Cw+0501 and identification of HiA-Cw+0711.";

Tissue Antigens 53:510-512(1999).

-!- FUNCTION: Involved in the presentation of foreign antigens to the immune system.

-!- SUBMNIT: Heterodimer of an alpha chain and a beta chain (beta-2-microglobulin).

-!- SUBMNIT: Heterodimer of membrane protein.

-!- POLYMORPHISM: The following alleles of Cw-7 are known: Cw+0701, Cw+0703, Cw+0706, Cw+0706, Cw+0709 and Cw+0711. The sequence shown is that of Cw+0701.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HLA CLASS I HISTOCOMPATIBILITY ANTIGEN,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pfam; PF00047; ig; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -i- FUNCTION: Required for correct localization of precursor proteins bearing signal peptides with the twin arginine conserved motif S/T-R-R-X-F-L-K. This sec-independent pathway is termed TAT for twin-arginine translocation system. This system mainly transports proteins with bound cofactors that require folding prior to export (By similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gape

--- FUNCTION: Cytokine that binds to LTBR/TNFRSF3. May play a specific role in immune response regulation. Provides the membrane anchor for the attachment of the heterotrimeric complex to the cell surface. Isoform 2 is probably non-functional.

--- SUBUNIT: Heterotrimer of either two LTB and one LTA submits or (less prevalent) one LTB and two LTA submits.

--- SUBCELLULAR LOCATION: Type II membrane protein (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Alternative splicing; Polymorphism.

SUBUNIT: Heterotrimer of either two LTB and one LTA subunits or (less prevalent) two LTA and one LTB subunits (By similarity).
SUBCELLULAR LOCATION: Type II membrane protein (Potential).
SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              15-WAR-2004 (Rel. 43, Last sequence update)
15-WAR-2004 (Rel. 43, Last annotation update)
Lymphotoxin-beta (LT-beta) (Tumor necrosis factor C) (TNP-C) (Tumor necrosis factor ligand superfamily member 3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               class I

ROWEN L., QIN S., Madan A., Abbasi N., James R., Dickhoff R.,

Shaffer T., Ratcliffe A., Loretz C., Lasky S., Hood L.;

Sequence of the mouse major histocompatibility class III region.";

Submitted (OCT-1999) to the RMEL/GenBank/DDM databases.

-!- FUNCTION: Cytokine that binds to LTRE/THFRSP3. May play a specific

role in immune response regulation. Provides the membrane anchor

for the attachment of the heterotrimeric complex to the cell
                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 eurface.
-1- SUBUNIT: Heterotrimer of either two LTB and one LTA subunits or (less prevalent) two LTA and one LTB subunits (By similarity).
-1- SUBCELLULAR LOCATION: Type II membrane protein (Potential).
-1- SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      eurface.
-!-SUBUNIT: Heterotrimer of either two LTB and one LTA subunits or (less prevalent) two LTA and one LTB subunits (By similarity).
-!-SUBCELLULAR LOCATION: Type II membrane protein (Potential).
-!-SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Q9JMIO; Q9JM11;
